

International Conference on Low-Energy Electrodynamics in Solids

SCOPE

LEES 2016 will be a forum for the interdisciplinary discussion of the low-energy electrodynamics in solids, at both the theoretical and experimental methods of optical/photoemission spectroscopy, inelastic neutron/X-ray scattering, scanning tunneling microscopy/spectroscopy and so on, with specific emphasis on the electronic and magnetic properties of quantum materials.

TOPICS

Cuprate & Iron-based superconductors, Graphene & Dirac materials,
New methods and techniques, Weyl semimetals, Topological effects,
2D electronic systems, Heavy Fermions, Novel superconductors,
Novel physical properties and new materials, Multiferroics & Ferroelectrics,
Other strongly correlated systems, Non-Fermi & Fermi liquids in metals,
